

SEARCH METADATA · TECHNICAL CHECKS · LAB PERFORMANCE

# SEO & Performance Audit

A route-by-route review of page titles, descriptions, headings, canonical links, structured data, supplied photography and local browser performance.

Sangli, Maharashtra

Prepared 4 October 2026

## Audit snapshot

Scope: every URL listed in the generated XML sitemap

|                                               |                                                       |                                                |                                                      |                                                     |                                                      |

# Homepage performance

Three cache-disabled local Chromium runs · median and range

| Metric                          | Desktop · 1365 × 768 CSS px                                                                                | Mobile · 390 × 844 CSS px                                                    |
|---------------------------------|------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| First Contentful Paint (FCP)    | 0.62 s<br>Range 0.60 s–1.00 s                                                                              | 2.32 s<br>Range 2.32 s–2.42 s                                                |
| Largest Contentful Paint (LCP)  | <b>0.62 s</b><br>Range 0.60 s–1.11 s                                                                       | <b>2.33 s</b><br>Range 2.32 s–2.42 s · Mobile improvement remains a priority |
| Browser load event              | 1.14 s<br>Range 1.13 s–1.35 s                                                                              | 6.27 s<br>Range 6.26 s–6.28 s                                                |
| Transferred page resources      | 1.14 MB                                                                                                    | 1.07 MB                                                                      |
| Cumulative Layout Shift (CLS)   | 0.0015                                                                                                     | 0.0000                                                                       |
| Interaction to Next Paint (INP) | Not measured in this no-interaction lab test; validate with real-user data or an interaction-focused test. |                                                                              |

**Test conditions.** Desktop: 1365 × 768 CSS px, 10 Mbps down / 40 ms latency, No CPU throttling. Mobile: 390 × 844 CSS px, 1.6 Mbps down / 150 ms latency, 4× CPU throttling. The homepage was measured in the Replit workspace over HTTP, not on a public production domain. These are repeatable local lab readings—not PageSpeed Insights/Lighthouse scores or real-user Core Web Vitals. Production speed and field data remain unverified.

# Technical SEO status

| Area                     | Local audit result                                                                                                                         | Scope note                                                                                                                      |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| Indexable page inventory | 41 sitemap-listed HTML routes; 41/41 returned HTTP 200 locally.                                                                            | Robots.txt and sitemap.xml are utility endpoints, not counted as HTML pages. Admin/API routes, redirects and 404s are excluded. |
| On-page metadata         | 41/41 unique titles and descriptions; one H1, one canonical, viewport, Open Graph and Twitter card tags on each route.                     | Canonical host and indexation need production-domain verification.                                                              |
| Structured data          | JSON-LD parses on all audited routes. Site-wide Hospital/WebSite graph; 40 breadcrumbs, 14 FAQ pages, 2 physician profiles and 7 articles. | Syntax was checked locally; rich-result eligibility is not guaranteed.                                                          |
| Crawl directives         | robots.txt returns plain text, allows public routes and references the XML sitemap.                                                        | Production robots policy and sitemap host have not been checked.                                                                |
| Image accessibility      | 0 missing image alt attributes across the 41 rendered routes.                                                                              | Alt-text relevance and image licensing/consent still require human review.                                                      |

## Content and launch actions

- **Production domain:** No public HTTPS host was supplied. Confirm the live canonical URLs, robots.txt, sitemap hostname and redirects, then submit the sitemap to Search Console.
- **Mobile speed:** Homepage local mobile LCP median is 2.33 s. Re-run on the production host; optimize the critical path if the same result persists.
- **Medical review:** Have a qualified clinician review the exact health-article and department copy before adding reviewer credentials or presenting it as clinical advice.
- **Verify hospital claims:** Bed count, credentials, experience, services, test availability, insurance participation and operational details need hospital approval.
- **Metadata refinements:** Descriptions are unique (137–168 characters). Review length and search intent individually; character limits are guidance, not ranking guarantees.

## Image, privacy and hosting checks

- **Doctor portrait:** The second supplied portrait is associated with Dr. P. C. Patil in the site; confirm identity and approval before publication.
- **Patient privacy:** The supplied bedside image showing patients was not published because documented consent was unavailable.
- **Pharmacy imagery:** Pharmacy-front photos were not published; the signage names “Malati Nursing Home Pharmacy,” whose relationship to this hospital is unconfirmed.
- **Hosting security:** This workspace audit does not verify production HTTPS, credentials, server headers, backups or access controls. Check these on the live host before launch.
- **Image delivery:** Selected large WebP photos were reduced to a 1280 px maximum dimension; original source assets remain preserved.

This is a technical/on-page snapshot, not a ranking guarantee or “100% SEO” certification. Search Console indexing, production Core Web Vitals, Lighthouse/PageSpeed scores, live HTTPS and hospital/medical claim accuracy were not verified.

# Routes, titles, descriptions and H1 headings

41 URLs · title lengths 41–65 characters · descriptions 137–168 characters

| URL ROUTE          | PAGE TITLE AND H1                                                                                                                      | META DESCRIPTION                                                                                                                                                                           |
